

HOLOS / POSTINI - SECURITY AND SIMPLICITY

POSTINI

POSTINI is an e-mail security service which seeks the protection of inter-business communications.

Nowadays, as it is widely agreed, there are threats to external information in Organizations (via e-mail spam, virus, malware), and quick virus mutation grow stronger and the same happens in terms of internal threats (namely leaking data). Aware of the damages that those threats bring to organizations, HOLOS, a Google Partner, provide a set of defense tools against virus and spam, namely in areas of messages protection and archiving.

Postini allows customization of services according to clients needs, as well as a reduction of the initial investment, given that it can provide three different commercial approaches - Google Message Security and Google Message Discovery.

The process is simple and limited to the following steps:

- . Capture - E-mail treatment in real-time
- . Storage - Reliable storage, policy of flexible retention
- . Access - Access control Policies, personnel file
- . Search - Quick Search, simple exports
- . Reporting - Complete and flexible audit reports
- . Setting - Minimum by users or customer organizations

Postini allows e-mail delivery of E-mails without virus and guarantees the spam control, besides enabling the storage of your e-mails up to 10 years. This tool will increase the mail server efficiency, the available broadband, and consequently the productivity of employees which thus enables you to get focus on strategic activities that drive your business.

Characteristics:

- . High operability, ensuring a SLA of 99,999%;
- . Maximum 60 seconds latency;
- . E-mail treatment in real-time and memory;
- . 100% Virus protection;
- . 98% Rate Spam Capture;
- . 0.0003% Rate false positives;
